

Instantly Observe any Object Entirely in Focus

The New Standard for Microscopes

The VHX is an all-in-one microscope that incorporates observation, image capture, and measurement capabilities. Any user, regardless of their experience, can now obtain high-quality, fully-focused images in an instant.

View any Area Completely in Focus in Less than a Second

Advanced functions eliminate the need for focus adjustment

Eliminate focus adjustment

Real-time depth composition P.8

EVOLUTION OF KEYENCE DIGITAL MICROSCOPES

Quick and easy observation - KEYENCE continues to develop easy-to-use products that enable high-quality imaging by anyone. KEYENCE relies on customer feedback when developing future microscope products to ensure that each system meets and exceeds the needs of users.

FIRST GENERATION

Magnified observation without looking through eyepieces

For the first time, a group of people are able to observe a large depth-of-field image on a monitor quickly and easily. Based on this concept, the first-generation model, VH-6000, made its debut by using a 280,000 pixel CCD camera. Since then, development has continued to increase the camera resolution while simplifying the imaging process.

SECOND GENERATION

Marking the beginning of a digital era with 3D observation

A growing need to view objects entirely in focus, even at high magnification, led to the development of a depth composition function (an algorithm that combines several partially-focused images into a fully-focused image). This technology paved the way for 3D observation.

THIRD GENERATION

16-bit imaging with high-level gradation

Two difficult types of samples to image are shiny surfaces and low contrast surfaces - one produces too much glare while the other has few detectable features. These issues were resolved with the development of a technology that captures images at different brightness levels and then produces an image with a high level of colour gradation. This made it possible to thoroughly inspect even the most challenging materials.

FOURTH GENERATION

Fully-focused images in real-time

The ability for any user to be able to quickly see a fully-focused image at all times was an increasing demand. Every component of the hardware had to be reviewed to meet this request. The system will now automatically adjust focus as the user moves a part so that focused images are seen at all times. The speed and ease with which this is achieved mark the beginning of a new style of magnified observation.

Product Concept

Advanced usability

The VHX covers all basic analysis operations - observation, image capture, and measurement - in a single unit.

Achieves fast, easy, and accurate imaging that cannot be accomplished with traditional optical microscopes.

Even large samples can be observed non-destructively.

OBSERVATION

Depth-of-field 20 times greater than optical microscopes

This is one of the fundamental features of VHX Digital Microscopes that greatly increases ease-of-use. The lenses, camera, and graphics engine are designed to optimise the relationship between depth-of-field, resolution, and brightness.

Pins (100x)

Multi-angle observation

View an object from any angle by tilting the lens up to 90 degrees and rotating the stage 360 degrees.

Because the stand and stage can be moved instead of the actual part, observing a target from various angles can be done without having to manipulate the part by hand.

IMAGE CAPTURE

Rapidly save images and data

The built-in 500 GB HDD allows images, videos, and measurement data to be saved to the system. The saved files can be viewed on a PC or other devices easily via LAN or USB. Templates can also be created to generate reports automatically.

MEASUREMENT

Measure directly on the screen

Dimensional measurements can be made on the microscope by just clicking the area to be measured with the mouse. Measurement data is stored with the image file for easy information sharing, and results can even be exported as a CSV file.

Advanced Functions

View any Area Completely in Focus with Real-time Depth Composition

Due to the high frame rate of its camera, the VHX can quickly scan through the focal range of a sample and recognise areas of focus to build a fully-focused image. This provides intuitive and instant focusing, and satisfies the universal need for focused magnified observation.

Connector pins (50x)

You can observe a fully-focused image instantly by just moving the motorised X-Y stage to a desired area.

Instant full focus eliminates manual adjustments

Faster observation and more thorough analysis using increased sample data

No need for focus adjustment

No need for manual depth composition

Fully-focused observation without any user adjustments

A fully-focused image can be captured in less than one second. To observe another area of interest, just move the stage and the system will automatically generate a fully-focused image of your target. The VHX has revolutionised observation by providing fully-focused images of objects without the need for focus adjustments or manual depth composition.

Conventional

move the lens through the z range for composition...

finally obtain a fullyfocused image

VHX-5000

Just select the area to view...

view a fully-focused image...

view a 3D image

A fully-focused image is captured in under one second. 3D image data is captured simultaneously.

KEYENCE's original digital focusing technology

The industry's fastest, 50 frames per second camera, sends out a large amount of image data with every focus position, and the REMAX V next-generation graphics engine processes this data at a super-high speed. This technology identifies the data with the best focus for each pixel and generates a fully-focused, magnified image instantly on the screen.

Industry's fastest 50 frames/sec. camera

REMAX V Next-generation graphics engine

Advanced Functions

Improving Image Resolution: High-resolution HDR

A high-resolution image is obtained by using short-wavelength light and the HDR (High Dynamic Range) function to capture multiple images at varying shutter speeds. This produces a high colour gradation image with high resolution and sharp contrast that was previously impossible to obtain.

Normal observation of IC (1500x)

High resolution HDR observation of IC (1500x)

Pixel shift technology

Short-wavelength filter achieves higher resolution

The optimal wavelength of light is selected based on the characteristics of the lens to capture sharp images with minimal chromatic aberration. By combining short wavelength light with KEYENCE's original pixel shift technology, image resolution can be increased by up to 25%.

HDR+ function

The camera captures multiple images at different brightness levels by varying the shutter speed, and then produces an image with a high level of colour gradation data. This allows for clear observation of targets with glare or low contrast that would be impossible to image accurately with traditional microscopes. A new algorithm that accurately represents the colours of the target makes observation more similar to that with the naked eye.

High-resolution, Wide Area Imaging: Ultra High-speed Image Stitching

With any optical system, as the magnification is increased the field-of-view decreases. The VHX incorporates an image stitching algorithm with a motorised XY stage to automatically move and stitch together adjacent images in real-time. This will provide users with a high-resolution (up to $20,000 \times 20,000$ pixels), overall view of the target, while preventing any misalignment typically associated with other stitching techniques.

20,000 pixels

Navigation function

The stitched image can be utilised as a navigation screen. Clicking on the position that you wish to observe will automatically move the stage to the selected location. The current field-of-view is outlined in yellow and the previously viewed field-of-view is outlined in red, making it easier to maneuver the stage. This function is also extremely useful for understanding which area of the target is being observed when imaging at a higher magnification.

Auto Correct function

Produces a high-quality stitched image by automatically adjusting for brightness changes that can result from aberrations around the periphery of the lens.

Conventional

Optimal image function

One click of the OPTIMISE button displays nine different lighting scenarios. From there, all the user needs to do is to click the image that is ideal for observation. The optimal observation conditions for any target can be found easily and repeatably.

Light Shift function

Simply pushing the Light Shift button on the console instantly changes the lighting. The lighting can be switched from full illumination to partial illumination, which enhances the projections and depressions of the target.

Image stabilisation function

Through advanced image processing, the VHX-5000 is able to correct for position misalignments in an image at the sub-pixel level. This function makes it possible to perform high-magnification imaging without being affected by environmental vibrations.

3D Display Function

Even when a target's surface has significant variation in height, a fully-focused image can be obtained instantly by compiling images at different focal planes. After creating the composite image, the focal position data can then be used to construct a 3D model. When the motorised stage is used, this 3D image can be displayed easily by just pushing a button on the console.

Accurate D.F.D. method

KEYENCE has developed a new algorithm that uses fine changes in texture to calculate height data. This means a 3D image can be constructed from fewer images.

[D.F.D. (Depth from Defocus) method]

The Depth from Defocus method obtains 3D information by analysing the focus of a 2D image. Even if an image is not captured in complete focus, a calculation is made to determine height data. This allows accurate 3D image construction with fewer steps in the Z-axis.

threads

Auto Adjust function allows for depth composition even when imaging at an angle

Edge displacement and vibration caused during image capture are automatically corrected and a comprehensive, fullyfocused image is constructed. The composition can use not only images captured perpendicular to the sample, but also those captured from an angle.

3D Image Stitching & Measurement Functions

Once a 3D image has been created, data can be collected to calculate the profile, height, and volume for any area within the field-of-view. When used in conjunction with the image stitching function, a wide-field 3D image can be generated to allow users the ability to understand the topography over an entire target.

Easy Recording with Just the Press of a Button

The VHX has been equipped with a 500 GB hard disk drive, so images and video can be recorded during observation. Our original high-speed filing system ensures effortless handling of a high volume of images. File names, titles, organisation names, lenses, and comments can be registered with each image, providing for quick database searches.

Split screen/Comment entry function

The viewing area can be split horizontally, vertically, or in quadrants. This can be used to quickly perform side-by-side image comparison of good and bad parts or when viewing a low-magnification and high-magnification image. Comments and scale bars can also be inserted into the image. Measurements can be made independently in each separate window.

Each display area can be moved independently on the split screen.

Images of different magnifications can be measured individually.

Video recording function

Accurately capture an object's motion by recording a video at up to 50 frames per second, with recording times of up to one hour. Users can fast forward, advance a single frame, and capture still images from the video file. Each video is saved as an AVI file that can be played on the VHX-5000 or a separate computer.

Video recording up to 1 hour long

Ant (50×)

Timer capture function

The VHX can be programmed to capture images based on a given time interval. Users can monitor a process over a given period of time by loading the saved images to a PC via LAN.

Bacterial growth

Observation settings are saved automatically

Parameters such as brightness level or camera settings will automatically be saved with each image. Users can apply the exact same settings when observing similar parts by simply loading the file.

Shutter Speed	Light Shift	White Balance
Gain	Edge Enhance	Light Intensity

PC mode/Anti-virus software

With the PC mode, various drivers for peripheral software or equipment can be installed on the microscope, including drivers for printers, Microsoft Office, and anti-virus software. This makes it possible to use the microscope in a way that best fits your operating environment.

Report function (report preparation)

Create reports containing images by installing Microsoft Word or Excel and then setting up a standard template. Details such as the capture date, lens, and magnification will be recorded automatically.

Network compatible

The VHX can be connected to a network via LAN to allow sharing/transfer of images with other departments or remote locations. This image and data sharing ensures immediate and accurate action in urgent situations.

Real-time Measurement

Users can complete all measurements directly on the screen with just a few clicks of the mouse. This is significantly easier and faster than systems that require a user to capture images, import them to a PC, and then use external software to complete measurements on the sample.

Various measurement tools

With 21 measurement tools available, nearly any feature of interest can be inspected with the VHX.

Also, with the added ability to re-position a measurement point, it is easier to make quick changes to measurements to confirm accuracy.

TRIPLE'R sensor automatically recognises lens/magnification

KEYENCE's advanced sensor technology and accumulated microscopy/optical expertise have been combined to allow the VHX to recognise three types of information: lens connection (no cable required), lens type, and magnification. The system will automatically adjust the stage movement speed and calibration data when the magnification is changed.

Edge detection function

Even when the measurement point selected on the image is not perfectly on the edge of the target, this function will adjust the measurement point to the correct edge location. This reduces variation between operators and ensures high repeatability of dimensional measurements.

Print pattern (150x)

High-resolution measurements

By capturing a high-resolution image (4800 x 3600 pixels), measurements can be made on an image that is nine times larger than a standard image, increasing the accuracy and repeatability of the measurements.

Moving the stage allows you to measure a target of up to 100 mm x 100 mm. Measurements can even be completed over an area that exceeds the field-of-view of the lens being used, allowing you to perform both observation and measurement of a larger target with a single microscope.

Display unit OP-84483

Digitally displays the distance traveled by the stage

Transmitted illumination unit OP-84484

Clearly projects edges of a target

X-Y measurement system VH-M100E

Supports traceability

The X-Y measurement system ensures highly reliable measurements based on a traceability system that complies with international standards.

Measurement software for improved usability VHX-H2M2

Real-time screen display

The XYD measurement results are displayed on the monitor screen in real-time.

Various measurement modes

Distance, radius, angle and other measurement modes are included.

Wide image capture

Once a wide-field image captured under low magnification is registered, the current measurement point is always indicated even after the field-of-view is changed under higher magnification. The measurement point can be easily checked for an entire image.

One-click Auto-measurement

Until now, it was necessary to complete all measurements independently with the mouse. With the VHX-5000, multiple measurements are stored in a template (template data) and pattern matching technology is used to match the template to a part to enable batch measurement and data compilation.

Industry's first One-push calibration

ONE TOUCH

Conventionally, it was necessary to place the calibration scale in the correct position to then obtain proper focus for calibration. With the VHX-5000, anyone can easily perform proper calibration with the motorised XYZ stage.

Focus adjustment & position alignment are unnecessary

Calibration is possible just by placing the scale on the stage and pressing a button. There is absolutely no need to find the correct location and adjust the focus manually.

Automatic area measurement/count

Area Measurement Binary conversion

Particle count

Easily extract target areas and quantify their area and other 2D parameters. Each specified location can be edited to remove unnecessary areas or separate overlapping targets.

Measurement result (histogram)

Measurement preview

Crystal (100x)

Displays a preview of four binary conversion algorithms so that users can select the one that best extracts the areas that they are looking to measure. Even when measuring an object with uneven brightness, with the automatic shading correction function, it is possible to perform binary processing easily.

Maximum area measurement

Measures the largest target area within a user-specified field by simply selecting the area with the mouse. Measurements can be performed with ease even when measuring complicated shapes.

Probe dent (1000×)

Extraction condition reproduction function

The system automatically saves the conditions that were used during extraction/binarisation. When analysing different targets, it is possible to implement extraction with the same conditions. This also ensures that the same conditions are applied when multiple users measure the same object, eliminating user variation.

Cross-section of multi-layered film (1000x)

Free-angle observation system (XYZ motorised)

This versatile stand includes XY and Z axes controls for adjusting position and focus, and the stage can be rotated freely. A custom mechanism allows the camera and lens to be tilted around the object being viewed, while still keeping that object perfectly centred in the field-of-view.

Faster Z-axis movement

The maximum speed of the motorised Z-axis stage has increased to 17 mm/sec. This significantly improves the auto-focus and depth composition speeds.

Better viewing repeatability

A new locking mechanism has been incorporated into the stand to ensure that the lens is set to 0 degrees.

Improved seismic capacity

By using an aluminium diecast frame for the stand, vibration-resistance has increased twofold over previous models.

Built-in tilt angle sensor

A built-in sensor detects the tilt angle of the stand. Now it is possible to display the angle on the observation screen or to save the condition during recording.

LED transmitted illumination

Transmitted lighting comes standard with the motorised XY stage, producing consistent brightness from low to high magnifications. It is also possible to use the LED transmitted lighting in conjunction with reflected illumination from the lens. The light from each source can be adjusted independently, making it possible to perform observation with an optimum balance of light intensity.

Reflected + transmitted illumination

PCB through-hole (100×)

Transmitted light switching filter

When viewing a sample at low magnification, the light is applied uniformly to the entire target. As the magnification is increased, the light can be concentrated to improve the contrast of the image.

Slice of brain tissue (200x, composite of 120 images)

Mouse kidney section (150x comparison image)

Rotation sensor for accurate stage movement

A sensor is built into the motorised XY stage that recognises the amount of rotation of the stage. Regardless of the angle of rotation, the stage will move in the correct direction.

Regardless of the rotation angle Regardless of the rotation angle

High-Performance Low-Range Zoom Lens **VH-Z00R/Z00T**

Macro zoom lens

With a range from 0.1x - 50x magnification, a target can be viewed from its entirety down to more in-depth observation. This macro lens excels in workability and high performance with click-style magnification adjustment, an aperture mechanism, and a viewing distance of 95 mm or more.

Workir (mm)	ig distance			8	5		

Magnification on a 15-inch monitor.

Long distance lens - 85 mm working distance

With its cutting-edge optical design and advanced illumination technology, the LW lens achieves a maximum magnification of up to 500x and a working distance of 85 mm. The LW lens can capture deep recessed features in the target clearly and offers ample working space for dramatically improved imaging efficiency.

Easy observation of deep, recessed features of the target

Aluminium surface (500x)

The TRIPLE'R compliant lenses are fitted with Automatic Lens/Zoom Recognition units.

^{2.} With the wide-area illumination attachment equipped.

Frequently-used functions in an easy-to-use package

LARGE DEPTH-OF-FIELD

Achieve 20 times greater depth-of-field than a conventional optical microscope.

OBSERVE, CAPTURE, AND MEASURE WITH JUST ONE DEVICE

Built-in hard drive and network connectivity allows for quick and easy communication of data and pictures.

FREE-ANGLE OBSERVATION

Tilt the optics up to 90 degrees and rotate the stage completely for flexible operation.

DEPTH COMPOSITION AND 3D DISPLAY FUNCTIONS

Capture fully-focused images even for targets with uneven surfaces.

Free-angle observation system VH-S30F/S30B

Simple, versatile and intuitive operation - Motorised Free-Angle Stand

Objects that cannot fit onto the stage or that require a large working distance can still be imaged easily

EASY-TO-ADJUST

Easy focus adjustment, X-Y stage movement, rotation and oblique axis motion. A custom mechanism allows the target to stay centred in the field of view, even when the lens unit is inclined or rotated.

QUICK SETUP MARKS

The ideal setting position for different lenses is indicated on the arm

CABLE HOLDER

The cable is held in place to prevent vibrations and protect against abrasions and deterioration.

VIBRATION-PROOF RUBBER

Absorbs low to high frequency vibration, allowing for observation of specimens without interference from environmental vibration.

HIGH-STABILITY FRAME

The die-cast main body provides a highly rigid structure with a low centre of gravity that allows for more stable observations.

Quick depth composition & 3D display function

Objects with uneven surfaces could never be observed clearly and completely in focus at one time

Just press the console button.

Generate a 3D display of a sample

simply by moving the lens from bottom to top

Focus first on the lowest plane and then move toward the highest plane...

Rotate and zoom the display using a mouse

Auto Adjust function to prevent aberration during depth composition

Edge displacement and image blurring due to camera-shake while capturing an image with a non-telecentric lens are automatically corrected and a comprehensive, completely focused image is constructed. This method is at least five times faster and more accurate than conventional position correction methods and obtains accurate information even for easily distorted, low magnification areas.

Conventional image

Adjusted by the Auto Adjust Function

- TRIPLE'R compliant lenses VH-Z00T/Z20T/Z20UT/Z50T/Z100UT/Z100T/Z50T/Z50T/Z50T are fitted with Automatic Lens/Zoom Recognition units and connection recognition mount, respectively. 2. OP-72407 and OP-72406 are required when coaxial illumination is used.
 3. Included with the VH-Z20UR/Z20UT.
 4. The optional bore fibre cable (OP-87201) is required.
 5. The optional light guide attachment (OP-87790) is required.
 6. OP-66871 is required when the VH-Z00R or Z20R is used.
 7. A C-mount adapter suitable for the microscope is required.

■ VHX-5000/900F (Software module details)

Software	Video recording software	Allows recording/playing back moving images.		
	High quality depth composition software	Captures multiple images focused on different heights and composes a single image from them.		
	Area measurement software	Measures an area of a 2D image.		
	Time-lapse software	Captures images automatically at specified time intervals.		
	Screen splitting software	Displays vertical, horizontal, or 4-part split screens.		
	Comment input software	Allows inputting and displaying comments such as characters and markers on the observation image.		
	Image improvement software	Provides image processing functions for modifying images to make observation easier.

	Edge enhancement function	Provided (200 steps), moving images supported		Provided (200 steps), moving images supported	
	Gamma correcting function Camera-shake correcting function	Provided Provided (Moving images supported)	/	Provided Provided (Moving images supported)	,
	Split function	Vertical, horizontal, 4-part, and 9-part split and combination display	'	Vertical, horizontal, 4-part, and 9-part split and combination display	/
	Video recording/playback function	50 frames/sec. max. (Image size: 1600 x 1200, 800 x 600, 640 x 480)		30 frames/sec. max. (Image size: 1600 x 1200, 800 x 600, 640 x 480)	- '
	Timer capture function	Provided Provided		Provided	
	Automatic unit S15 control function	Provided		Provided	
	Eucentric setting function	Provides a quide for eucentric position observation.		Provided	
	Real-time depth composition function	Ensures constantly focused, high depth-of-field image.	1	-	
	High resolution HDR function	Displays a high resolution and high gradation image.	1	-	
	High resolution observation function	Displays a high resolution image based on pixel shift technology.		-	
	Simple mode	Showing a group of functions selected according to the purpose.	1	Showing a group of functions selected according to the purpose.	1
	TRIPLE'R function	Provided		Provided	
		(Automatic lens connection/lens type/magnification recognition function)		(Automatic lens connection/lens type/magnification recognition function)	
	High-resolution dimensional measurement function	Provided		-	
	Distance, angle, radius, area, and other	Various functions provided		Various functions provided	
	measurement functions	Various functions provided		Various functions provided	
	Automatic count and area measurement	Provided (Feebles distance/eres massurement through heightness/colour outrestion	,	_	
	function Scale display	(Enables distance/area measurement through brightness/colour extraction Various scales provided	/	Various scales provided	
	Automatic edge detection	Provided Provided	-	Provided	_
easuring	Auto calibration	Full-auto (Numerical input is not required)		Full-auto (Numerical input is not required)	
nctions	One push calibration function	Provided	/		
	Measurement point replacement function	Provided	•	Provided	
	Measurement free display function	Provided		Provided	
	Specified dimension display function	Provided		Provided	
	Measurement auxiliary function	Provided (Automatic edge extraction, multi-point input)		Provided (Automatic edge extraction, multi-point input)	
	CSV storage	Provided		Provided	
	3D height colour/scale display function	Provided		Provided	
		(Enables X/Y/Z-axis height scale display and colour bar display related to height)	(Enables X/Y/Z-axis height scale display and colour bar display related to height)	
	Height between two points measurement function	Provided		Provided	
nual XY	XY stage measurement	Provided		Provided	
asurement	-				
tem	Wide image display function	Provided		Provided	
asuring	3D profile measurement	Provided (Displays height profile on a specified line on the 3D screen.)		Provided (Displays height profile on a specified line on the 3D screen.)	
ctions tional	3D cross saction profile measurement				
ctions of	3D cross section profile measurement	Provided		Provided	<u> </u>
VHX-H4M/ VHX-S15)	3D volume measurement	Provided		Provided	
Utility	Complete style covering Observation,	All-in-one system that enables all operations for Observation,		All-in-one system that enables all operations for Observation,	
	Recording and Measurement Filing system	Recording, and Measurement without using a PC Provided		Recording and Measurement without using a PC Provided	
	Bayonet-type attachment	Provided		Provided	
	Keyboard entry	Enabled Enabled		Enabled Enabled	
	Compatible with a foot switch	Enabled		Enabled	
	User settings	Provided		Provided	
	PC mode	Provided (System protection setting available)		Provided (System protection setting available)	
	Function guide	Provided Provided		Provided Provided	
		Image data transfer between the VHX and PC can be performed easily.		Image data transfer between the VHX and PC can be performed easily.	
companying	PC communication software	(LAN)		(LAN)	
tware ee of	3D reproduction software for the PC	The PC can reproduce a 3D image saved in the VHX.		The PC can reproduce a 3D image saved in the VHX.	
arge,	(Available free of charge)	· =		o carreproduce a ob image carea in the FIM.	<u> </u>
o copy	3D HDR playback/measurement/stitched image playback software (Available free of charge)	Allows adjustment of HDR parameters and display/ measurement of stitched images.		Allows measurement on the PC.	
striction)	One-click measurement compilation	Compiles the result of one-click measurement and transfers it to Excel.			
C software)	software (Available free of charge)			_	1

^{1.} Provides superior resolution and colour reproduction to the normal mode.
2. Provides superior colour reproduction to the high resolution mode.
3. Supported only when the multi-scan camera VHX-5100 is used.
4. Approximately 16,770,000 colours are realised with the FRC processing of the display controller.
5. The LCD monitor provided in the VHX Series is based on extremely advanced technology.

Rarely, an unlit pixel (black spot) or lit pixel (bright spot) may exist on the monitor screen. However, this is not an indication of the LCD monitor being defective.
